Prescription

Current issues in financial accounting and reporting; alternative measurement bases from accounting and economics; the traditional framework of financial statements and other means of reporting.

Course Learning Objectives

By the end of this course, students should be able to:

1. Explain how the nature of different reporting entities affects financial reporting by those entities;
2. Assess the implications of recent developments in external reporting in respect of both business and the wider context of society (including harmonisation and corporate social responsibility);
3. Describe the applications and implications of various financial reporting standards in complex environments;
4. Evaluate the strengths and weaknesses of the current financial reporting requirements for particular entities, transactions and events against underlying concepts of accounting;
5. Develop new approaches to at least one circumstance where a weakness has been identified in the current reporting requirements.

Course Content

As an advanced financial accounting paper, this course focuses on developing core theoretical and practical issues in respect of financial accounting. We emphasise key issues that face accountants in practice and the development of an understanding of how different contexts affect accounting and financial reporting. Thus the overarching theme underpinning the course is the different reporting entities in New Zealand. Throughout the course we will seek to illustrate the importance of this issue by considering the impact of the nature of the entity on accounting choices, policies and other matters. This theme extends to considering entities of different legal structure, profit-orientation, sector and scale as well as the nature of the accounting group.

We will also seek to illustrate this by a series of meso-themes related to the reporting entity. These are:

- The qualitative characteristic of “relevance” – and how this concept may be interpreted in the context of different issues and/or different entities, including the entity-specific aspect of relevance, *materiality*;
- The qualitative characteristic of “faithful representation”, which encompasses aspects of completeness, neutrality and freedom from error – we will explore the impact of and difficulties associated with the concept; and
- The impacts of harmonisation (both international and across sectors) – we will consider what this means, and the practical implications for accounting for different entities in New Zealand.
