Dr. Hiria McRae teaches pre-service and in-service teachers in the areas of Māori education, specifically te reo Maori, science and technology, and education for sustainability. She recently completed her PhD which investigated Māori student engagement in science education from an iwi perspective.

Exploring Indigenous Community-Based Science Education Programmes

**Hiria McRae**

Indigenous community-based science programmes have been developed to improve outcomes for indigenous students in science education. This presentation will describe a set of principles, identified as having contributed to the successful facilitation of these programmes. These principles are proposed as part of an approach that could be used in indigenous and Māori communities to develop, examine and enhance community-based science programmes to benefit all involved.
