

Skateboarders

Laurie and Winifred Bauer

Question 43 asked about names for skateboarders:

43 A person who takes their skateboard everywhere with them can be called:

We knew that the terms *skatie* and *boardie* were in use, and this question was designed to elicit any variation which might exist.

The 14 schools which failed to produce a term for this type of person were largely rural, because skateboarding is an activity which requires a substantial concrete or at least tar-sealed area for its practice. In many rural areas, such a facility is lacking.

There were many one-off responses to this question, mostly terms of general abuse. Wherever the *skaties* in a classroom suggested a term of approval for themselves (e.g. *cool dudes*), the non-*skaties* countered with terms of abuse. These were almost all discounted in the analysis.

One term dominated the responses: *skatie*, with 121 reports found throughout the country, although the three northernmost schools in our survey were amongst the 14 which did not provide a response. Other basic terms were *skater* (26); *skateboarder* (9); *boarder/boardie* (4) – three *boarder's* and one *boardie*.

Skater was reported from Northland to Christchurch. However, there was an area in Hawkes Bay and down through the Wairarapa where it had a higher level of use, with correspondingly fewer reports of *skatie*. There were only 4 reports of *skater* in the South Island, just 15% instead of the expected 40%.

Skateboarder was predominantly found in Auckland, with 5 of the 9 reports, and a 6th also in the Northern Region, thus making 60% instead of the expected 35%. There was only one report of *skateboarder* in the South Island.

Boarder was reported from Auckland (twice), from Wanganui, and from North Canterbury. There is thus no apparent pattern in this data.

A number of responses concentrated on capturing the “excessive” component of the question, and the terms which were used to do this were also considered.

Those with more than one report were: *skate freak* (12); *hard-out skatie/er* (5); *hard core skatie/er* (5); *skataholic* (4); *skate fanatic* (2); *skate-lover* (2); *skate nerd* (2). (In these labels, all *skate-* or *board-* words were grouped, so that *skate fanatic*, *skateboard fanatic* and *board fanatic* were all grouped under *skate fanatic*, etc.)

Skate freak was reported from Northland to Southland, although there were only two reports in the South Island.

Hard-out was reported from Auckland (3) and Christchurch (2). With such low numbers of reports, it is unclear whether there is any significance in this.

Hard core was reported from Northland, the central North Island (2), and Christchurch (2). Again there seems to be no pattern to this.

Skataholic was reported from Northland, Auckland, Hawkes Bay, and Christchurch.

Skate fanatic was reported only from Auckland.

Skate-lover was reported from Auckland and Hawkes Bay.

Skate nerd was reported from Auckland and Southland.

There is thus little to suggest that there is any regional pattern to these terms.

A random group of terms remained to consider: *Homey (G)* (22); *tryhard* (18), *wank on a plank* (7); *cool dude* (5); *low rider* (2).

Homey appears to be a label which refers to the skaties' dress code: extremely generously-sized trousers which hang in folds round the ankles, have the crotch around the knees, and have large pockets; baseball caps worn backwards, heavy trainers, sloppy sweatshirts etc. It was reported from Northland to Southland, although there was a hole in the east of the North Island from the Bay of Plenty to Wellington.

Tryhard was reported from Auckland and Southland, with areas of greater intensity in Auckland, the Bay of Plenty and the timber belt, and Wellington.

Wank on a plank was reported only from the Central Region, from Hawkes Bay, Wellington, Nelson, North Canterbury and the South Island lake resorts. Because reports of this term were infrequent, it is unclear how much weight to give this.

Cool dude was reported twice from Auckland, and also from Hawkes Bay, Wellington and South Canterbury. There is evidently no pattern here.

Low rider (a term referring to the low crotch on the pants worn by skaties) was reported only twice, and would have been of no significance were it not for the fact that these are two schools which also reported *high rider* in answer to Q42. One is in Christchurch, and the other a school with much evidence of outside influence in Auckland.

None of the terms used in responses to this question showed any clear signs of social differentiation, although it is perhaps worth noting that a marginally lower proportion of the lowest decile schools reported the use of *skatie* than was the case in higher decile schools.

Statistical Analysis

The terms included in the statistical analysis were *skater*, *skateboarder*, and *wank on a plank*.

Skater was absent from the Southern Region. It is significantly more common in the North Island than the South (p-value 0.0137).

Skateboarder was absent from the Southern Region.

Wank on a plank is found only in the Central Region.

Summary

There is very little evidence of variation in the terms used for those who practise ollies and nollies, back flips and wheel grinds!

Nevertheless, a map of the three terms which showed some sign of regionalisation follows.

Map: *skater, skateboarder, wank on a plank*

Key

Note that the insets are not to scale, nor all on the same scale for practical reasons. Each box represents one school in both urban and rural areas.

skater
